To do so, we will study films from various cinematic traditions through the various ways in which music functions within them as a powerful meaning-making element. Under the assumption that film is an *audio-visual* medium, we will examine individual works representative of different genres—musicals, horrors, dramas, comedies, and cartoons. Consideration will be given to the relationship between music and image as well as music and sound as they emerge from close readings of individual scenes. We will also look at how music is represented in the story world of the film, whether a character performs, listens to, or ignores it.

Depictions in the visual arts tell their own story too, especially in respect of instrumental technique, ensemble formation, social context, and performance practice. For the most ancient types of music, archeological artifacts are the only sources that scholars can deploy. Where were the artifacts excavated? What were their conditions? Were similar objects recovered elsewhere? How can these treasured items be preserved from degradation?

MUSI2088. Music, AI, and the Future of Creativity

Generating a song in a split second is now a reality with advancements in AI, and in extreme cases it requires little to no prior musical training and is therefore accessible to most. Has this technology “democratized” music-making? Are we living in the best era to be a creative thanks to these “creativity-extending” tools? Or is this technology threatening the essence of creative expression and work, flooding our soundscape with algorithmically generated music “spam” and “deepfakes”? Is AI the end of art or the future of creativity? And what is creativity anyway? This course explores such questions at the intersection of music,

AI, and creativity, drawing from the rapidly expanding critical scholarship on AI as well as perspectives from popular media and within the music industry. While this course prioritizes socio-cultural and philosophical approaches to critiquing AI, we will also engage with the history of science and media studies, as well as writings from such fields as music information retrieval (MIR) and computational creativity. There will also be options to take on creative projects (e.g., AI-assisted songwriting and composing) in the course of the semester.

MUSI3038. Methodological perspectives in music I

This course aims to equip students with critical research methods by focusing on specific musical works (in any media), artifacts, or issues. It approaches an object of investigation from various methodological perspectives (e.g., historical, theoretical, philosophical, and anthropological), and will provide an overview of the reception history of the scholarship around the object as well as the latest research. The course promotes students' critical reflection on such methods and scholarly traditions. The object for investigation may vary from year to year. During the course, students will be required to formulate their own research question and carry out their own research. The course is designed to give undergraduates insights into the ethos of post-graduate research and form a bridge between the two "realms."

Prerequisite: MUSI2070; and either MUSI2081 or MUSI2082.

Assessment: 100% coursework.

This course concerns the relationship between music and the environment, broadly construed. The key question this course asks is, how can we understand music as an ecological phenomenon? The course aspires to answer this question in several ways: firstly, the course will introduce ecological models of musical and cultural analysis; secondly, we will discuss the concept of nature in various music traditions, including Western art music and Japanese traditional music, among others; and thirdly, the course will attend to the role of music in the ongoing global environmental crisis. Components of the course will cover soundscape studies, ecocriticism, as well as the more recent field of ecomusicology.
